Iván Dujaut

AI Product Manager · Buenos Aires, Argentina
dujautivan@gmail.com | ivandujaut.com | LinkedIn | GitHub

SUMMARY

Product Manager with 4+ years building products at startups and consultancies; for the last 3, leading end-to-end initiatives: discovery, MVPs, roadmaps, PRDs, user stories, backlog, KPIs and stakeholder management with agile methodologies. Launched two generative AI products (LLMs and RAG) that are now in production and published 13 analyses based on open data. Seeking a product or analytics role: Product Manager, Product Analyst or Business Analyst.

WORK EXPERIENCE

Instituto Politécnico San Arnoldo Janssen, Teacher **10/2024 – Present**

- Teach Digital Electronics I to 4th-year students and coach them for OATec, Argentina's national technology olympiad.
- Built and launched **Parcialito**, now used by **35 active students** and another teacher: it grades exercises with AI (Claude and OpenAI APIs, RAG), explains mistakes and suggests grades that I confirm. Saves me 5 hours of grading per week.

Prizmstack, Product Engineer **02/2026 – 10/2026**

- Led FIJI, a valuation platform and marketplace for US real estate brokerage owners: valuations went from two days in a spreadsheet to under ten minutes. 120 owners now use it to value their firms and 30 buyers are listed.
- Wrote ~25 PRDs and the user stories for the valuation engine (adjusted EBITDA and a risk-adjusted multiple) and managed the ClickUp backlog with 80/20 prioritization: shipped a usable MVP and iterated on it using usage metrics.
- Aligned founders and experts with usage data; turned their valuation criteria into a 20-decision guided assistant.

Banana Software, Frontend Trainee → Full-Stack Developer → Product Engineer **12/2021 – 01/2026**

- Led 15+ client projects end to end, across product and development (B2B and B2C, up to 1,500 active users), with 3–4 person squads; as the direct client contact, gathered requirements and agreed on scope and priorities.
- Defined roadmaps and wrote user and technical stories in Jira. Cut one in five planned features that didn't justify their cost and focused the effort on conversion and retention.
- Raised sprint predictability from 60% to 90% by modeling capacity per role and facilitating Scrum ceremonies.
- Increased checkout conversion by 30%: through funnel analysis and usability tests with 20 people, found that users wanted to ask the trip's captain questions before paying, so I replaced the post-payment chat with the captain's WhatsApp.

TUMO (Techstars Payments '24), Frontend Developer **08/2023 – 05/2024**

- First developer at a tax fintech for freelancers: defined and built its MVP from zero to ~100 users.
- Made the product calls: what to build first and what to defer, based on impact, regulation and speed.
- Redesigned onboarding by freelancer profile: minimal sign-up and an accountant as the first point of contact to build trust. Measured the funnel in Firebase before and after: conversion rose 40% on average over 3 months.

Dräger, Planner Contract Business (Buenos Aires) **10/2021 – 12/2021**

- Coordinated 8 field engineers and ~60 client accounts nationwide, with customer satisfaction above 90%.
- Cut idle time by 23% by matching upcoming maintenance visits with each engineer's availability.
- Managed spare-parts suppliers and order tracking in the ERP (Microsoft Dynamics NAV).

PROJECTS AND PUBLISHED ANALYSES

Each analysis ends with a recommendation. ivandujaut.com/projects

- **Insurance Advisor Bot (live with public demo, open source).** AI WhatsApp agent with RAG for advisory insurance sales. Decided to answer known questions without calling the LLM to cut cost and errors: it resolves 64% of inquiries with 97% accuracy (181 test conversations) and hands off the rest to a human advisor.
- **Insurance in Argentina: five analyses of regulator data (SSN and SRT).** Auto insurers cancel 12.76% of their policies each quarter; none of three home insurers I contacted would quote a price without my personal data.

EDUCATION

Instituto Tecnológico de Buenos Aires (ITBA), Bioengineering degree (5-year program) · Academic Excellence Scholarship
Per ITBA, years 4 and 5 are equivalent to European master's years M1 and M2. Thesis: ***two-year mortality prediction in colorectal cancer liver metastases using machine learning on clinical data from Hospital Italiano***.

SKILLS

Product: Roadmap and backlog | PRDs and user stories | Discovery and usability testing | MVP | Impact-based prioritization | Estimation | KPIs | Scrum | Jira | ClickUp | Linear | Figma
Data analysis: SQL (PostgreSQL, DuckDB) | Python (pandas, NumPy, scikit-learn) | PostHog | Data visualization | Excel
AI and development: LLMs (Claude and OpenAI APIs) | RAG | Conversational agents | Evals | TypeScript | Next.js | React | Node.js | Supabase | Docker | CI/CD
Languages: Spanish (native) | English B1 - Duolingo English Test
